ACADEMICS

University of Texas, Dallas — Senior 3.9 GPA

Graduates May 2026

- Computer Science with a concentration in Artificial Intelligence; awarded Academic Excellence and Dean's List

EXPERIENCES

 **Neo Accounting Firm** — Software Management Jun 2024 - Aug 2025

- **Linux/Bash** - Managed Windows environments and Linux servers for critical financial systems, employing Bash scripting and Infrastructure-as-Code (IaC) for file management, automation, and security hardening.
- **AI Integration** - Integrated AI automation using **tool-calling** and **MCP** based on my research at the university.
- **Cloud (AWS & Azure)** - Engineered scalable and cost-optimized cloud infrastructure, maintaining 99% uptime.
- **SQL Database** - Normalized, stored, and queried data using SQLite and later MySQL in a designed schema.

 **Nebula Labs** — React/Flask Engineer Oct 2023 - May 2024

- **Enterprise Codebase** - Worked in **Amazon**-trained teams on a scalable **Vite** codebase; implemented ESLint, Prettier, testing, and Git hooks while incorporating **Confluence**, GitHub merge requests, and code reviews.
- **React (JS/TS)** - Developed server-side rendered React with type-checking using TypeScript or JavaScript JSDocs.
- **Flask/Django** - Built RESTful APIs with modern frameworks, database integration, and **Firebase** authentication.
- **Electron Desktop App** - Automatically built and deployed a performant Mac, Windows, and Linux application.
- **Agile** - Drove iterative SCRUM development with adaptive planning to optimize sprint velocity and delivery.

PROJECTS

AI Research — Undergrad Researcher Nov 2024 - Present

- **TensorFlow/PyTorch** - Fine-tuned deep-learning models to achieve state-of-the-art performance in specialized fields, leveraging quantization and other optimization techniques to improve model efficiency.
- **Multi-Agent Systems** - Architected multi-agent systems with hierarchical structures to intelligently delegate tasks, enhancing the coordination of specialized agents and optimizing complex tool-calling sequences.
- **Agentic Systems & Tool-Calling** - Researched the ability of agentic systems to utilize tool-calling during chain-of-thought prompting to improve reasoning, planning, and execution in specialized tasks.

Java Game Development — Product Manager Aug 2023 - Nov 2024

- **Java/Kotlin** - Developed networked applications in IntelliJ, with custom client-server protocols and real-time state synchronization using OOP and composition paradigm, achieving thousands of users and downloads.
- **Gradle** - Developed a full enterprise-level codebase with Gradle build tools, scripts, caching, and plugins.
- **GitHub Workflow CI/CD** - Configured GitHub Actions to automatically build and package JAR artifacts.

US Air Force Computer Competition — Washington DC Finals Aug 2022 - Mar 2023

- **Cybersecurity** - Secured Cisco, Ubuntu, and Windows using Active Directory, PowerShell, and Registry Editor.
- **National Top 10** - Ranked top 10 of 4000+ in the CyberPatriot Competition; National Finals in Washington, DC.
- **Powershell** - Developed scripts for vulnerability scanning; detected 92% of threats during the competition.

SKILLS

Languages

JavaScript • TypeScript • C++ • Java • Swift • C# • Python • SQL • Go • Bash • HTML/CSS

Ecosystems

Node • Express • React • Next • Flask • Django • Tailwind • Git • .NET • TensorFlow/PyTorch

Other Skills

Figma • Adobe Creative Suite • Audiovisual Editing • Microsoft Office • Fluent in Chinese
